SRI SARADA COLLEGE FOR WOMEN (AUTONOMOUS)

SALEM – 16

Reaccredited with 'B++' Grade by NAAC

Affiliated to Periyar University

PG & RESEARCH DEPARTMENT OF MATHEMATICS

(DST-FIST & DBT-STAR SPONSORED)

Outcome Based Syllabus

B.Sc. MATHEMATICS

(For the students admitted in 2023-24 onwards)

B.Sc. MATHEMATICS

PROGRAMME OUTCOMES

PO1 **Disciplinary Knowledge:** Capable of demonstrating comprehensive knowledge and understanding of one or more disciplines that form a part of an undergraduate programme of study.

PO2 **Critical Thinking:** Capability to apply analytic thought to a body of knowledge; analyse and evaluate evidence, arguments, claims, beliefs on the basis of empirical evidence; identify relevant assumptions or implications; formulate coherent arguments; critically evaluate practices, policies and theories by following scientific approach to knowledge development.

PO3 **Problem Solving:** Capacity to extrapolate from what one has learned and apply their competencies to solve different kinds of non-familiar problems, rather than replicate curriculum content knowledge; and apply one's earning to real life situations.

PO4 **Analytical Reasoning:** Ability to evaluate the reliability and relevance of evidence; identify logical flaws and holes in the arguments of others; analyze and synthesize data from a variety of sources; draw valid conclusions and support them with evidence and examples and addressing opposing viewpoints.

PO5 **Scientific Reasoning:** Ability to analyse, interpret and draw conclusions from quantitative / qualitative data; and critically evaluate ideas, evidence, and experiences from an open minded and reasoned perspective.

PO6 **Self-directed & Lifelong Learning:** Ability to work independently, identify and manage a project. Ability to acquire knowledge and skills, including "learning how to learn", through self-placed and self-directed learning aimed at personal development, meeting economic, social and cultural objectives.

B.Sc. MATHEMATICS

PROGRAMME SPECIFIC OUTCOMES

PSO1 Acquire good knowledge and understanding, to solve specific theoretical & applied problems in different area of mathematics & statistics.

PSO2 Understand, formulate, develop mathematical arguments, logically and use quantitative models to address issues arising in social sciences, business and other context /fields.

PSO3 To prepare the students who will demonstrate respectful engagement with other's ideas, behaviors, beliefs and apply diverse frames of references to decisions and actions. To create effective entrepreneurs by enhancing their critical thinking, problem solving, decision making and leadership skill that will facilitate startups and high potential organizations.

Title of the Course		**ALGEBRA & TRIGONOMETRY**					
Paper Number		**CORE I**					
Category	**CORE**	**Year**	**I**	**Credits**	**4**	**Course Code**	**23UMACC1**
		Semester	**I**				
Instructional Hours per week		**Lecture**	**Tutorial**	**Lab Practice**	**Total**		
		3	**1**	**-**	**4**		
Pre-requisite		12^{th} Standard Mathematics					
Objectives of the Course		1.Basic ideas on the Theory of Equations, Matrices and Number Theory. 2.Knowledge to find expansions of trigonometry functions, solve theoretical and applied problems.					

Course Outcomes:

Students will be able to

CO1: Classify and solve reciprocal equations

CO2: Find the sum of binomial, exponential and logarithmic series

CO3: Find Eigen values, eigen vectors, verify Cayley - Hamilton theorem and diagonalize a given matrix

CO4: Expand the powers and multiples of trigonometric functions in terms of sine and cosine

CO5: Determine relationship between circular and hyperbolic functions and the summation of trigonometric series

Course Outline	**Unit - I (Hours: 12)** Reciprocal Equations-Standard form–Increasing or decreasing the roots of a given equation - Removal of terms, Approximate solutions of roots of polynomials by Horner's method – related problems. **Chapter 4 (Sections 32-34), Chapter 5 (Section 45) & Chapter 11 (Section 108)**
	Unit - II (Hours: 12) Summation of Series: Binomial - Exponential - Logarithmic series (Theorems without proof) – Approximations - related problems. **Chapter 1 (Page 84 - 88, 90 – 103) & Chapter 13 (Page 253)**
	Unit - III (Hours: 12) Characteristic equation –Eigen values and Eigen Vectors-Similar matrices - Cayley –Hamilton Theorem (Statement only) - Finding powers of square matrix, Inverse of a square matrix up to order 3, Diagonalization of square matrices - related problems. **Chapter 5(Sections5.1 -5.3) & Page 371**
	Unit - IV (Hours: 12) Expansions of $\sin n\theta$, $\cos n\theta$ in powers of $\sin\theta$, $\cos\theta$ - Expansion of $\tan n\theta$ in terms of $\tan\theta$, Expansions of $\cos^n\theta$, $\sin^n\theta$, $\cos^m\theta\sin^n\theta$ –Expansions of $\tan(\theta_1+\theta_2+,.,+\theta_n)$-Expansions of $\sin\theta$, $\cos\theta$ and $\tan\theta$ in terms of θ - related problems. **Chapters9 (Page 169 - 174) & Chapter 5 (Page 79 - 84)**
	Unit - V (Hours: 12) Hyperbolic functions – Relation between circular and hyperbolic functions Inverse hyperbolic functions, Logarithm of complex quantities, Summation of trigonometric series - related problems. **Chapter 4 (Page 52-57), Chapter 6 (Page 104 – 107& 110),**

	Chapter9 (Page 174 - 178), Chapter 10 (Page 197-202)& Chapter 13 (Page 241 - 245 & 256)
Extended Professional Component (is a part of Internal Component only, not to be included in the External Examination question paper)	Questions related to the above topics, from various competitive examinations UPSC/TRB/NET/UGC – CSIR/ GATE/ TNPSC/ others to be solved. (To be discussed during the Tutorial hour)
Skills acquired from the course	Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferrable Skill

COURSE	**GENERIC ELECTIVE - I**
COURSE TITLE	**PHYSICS - I**
CODE	**23UMAGEC1**
CREDITS	**3**
HOURS	**3**
COURSE OBJECTIVES	To impart basic principles of Physics that which would be helpful for students who have taken programmes other than Physics.

UNITS	COURSE DETAILS
UNIT-I	**WAVES, OSCILLATIONS AND ULTRASONICS:** simple harmonic motion (SHM) – composition of two SHMs at right angles (periods in the ratio 1:1) – Lissajous figures – uses – laws of transverse vibrations of strings – determination of AC frequency using sonometer (steel and brass wires) – ultrasound – production – piezoelectric method – application of ultrasonics: medical field – lithotripsy, ultrasonography – ultrasono imaging- ultrasonics in dentistry – physiotheraphy, opthalmology – advantages of noninvasive surgery – ultrasonics in green chemistry.
UNIT-II	**PROPERTIES OF MATTER:** *Elasticity*: elastic constants – bending of beam – theory of non- uniform bending – determination of Young's modulus by non-uniform bending – energy stored in a stretched wire – torsion of a wire – determination of rigidity modulus by torsional pendulum *Viscosity*: streamline and turbulent motion – critical velocity – coefficient of viscosity – Poiseuille's formula – comparison of viscosities – burette method, *Surface tension*: definition – molecular theory – droplets formation–shape, size and lifetime – COVID transmission through droplets, saliva – drop weight method – interfacial surface tension.
UNIT-III	**HEAT AND THERMODYNAMICS:** Joule-Kelvin effect – Joule-Thomson porous plug experiment – theory – temperature of inversion – liquefaction of Oxygen– Linde's process of liquefaction of air– liquid Oxygen for medical purpose– importance of cryocoolers – thermodynamic system – thermodynamic equilibrium – laws of thermodynamics – heat engine – Carnot's cycle – efficiency – entropy – change of entropy in reversible and irreversible process.
UNIT-IV	**ELECTRICITY AND MAGNETISM:** potentiometer – principle – measurement of theorem of using potentiometer –magnetic field due to a current carrying conductor – Biot-Savart's law – field along the axis of the coil carrying current – peak, average and RMS values of ac current and voltage – power factor

	and current values in an AC circuit – types of switches in household and factories– Smart wifi switches- fuses and circuit breakers in houses
UNIT-V	**DIGITAL ELECTRONICS AND DIGITAL INDIA:** logic gates, OR, AND, NOT, NAND, NOR , EXOR logic gates – universal building blocks – Boolean algebra – De Morgan's theorem – verification – overview of Government initiatives: software technological parks under MeitY, NIELIT- semiconductor laboratories under Dept. of Space – an introduction to Digital India

Board of Studies Date : 02.05.2023	

METHOD OF EVALUATION:

Continuous Internal Assessment	End Semester Examination	Total	Grade
25	**75**	**100**	

COURSE OUTCOMES:
At the end of the course, the student will be able to:

COURSE OUTCOMES	**CO1**	Explain types of motion and extend their knowledge in the study of various dynamic motions analyze and demonstrate mathematically. Relate theory with practical applications in medical field.
	CO2	Explain their knowledge of understanding about materials and their behaviors and apply it to various situations in laboratory and real life. Connect droplet theory with Corona transmission.
	CO3	Comprehend basic concept of thermodynamics concept of entropy and associated theorems able to interpret the process of flow temperature physics in the background of growth of this technology.
	CO4	Articulate the knowledge about electric current resistance, capacitance in terms of potential electric field and electric correlate the connection between electric field and magnetic field and analyze the mathematically verify circuits and apply the concepts to construct circuits and study them.
	CO5	Interpret the real life solutions using AND, OR, NOT basic logic gates and intend their ideas to universal building blocks. Infer operations using Boolean algebra and acquire elementary ideas of IC circuits. Acquire information about various Govt. programs/ institutions in this field.

MAPPING WITH PROGRAM OUT COMES:

Map course outcomes **(CO)** for each course with program outcomes **(PO)** in the 3-point scale of STRONG (**S**), MEDIUM (**M**) and LOW (**L**).

COURSE	**GENERIC ELECTIVE - I**
COURSE TITLE	**PHYSICS PRACTICAL - I**
CODE	**23UMAGECQ1**
CREDITS	**2**
HOURS	**2**
COURSE OBJECTIVES	Apply various physics concepts to understand Properties of Matter and waves, set up experimentation to verify theories, quantify and analyse, able to do error analysis and correlate results

ANY Seven only

1. Young's modulus by non-uniform bending using pin and microscope
2. Young's modulus by non-uniform bending using optic lever, scale and telescope
3. Rigidity modulus by static torsion method.
4. Rigidity modulus by torsional oscillations without mass
2. Surface tension and interfacial Surface tension – drop weight method
3. Comparison of viscosities of two liquids – burette method
4. Specific heat capacity of a liquid – half time correction
5. Verification of laws of transverse vibrations using sonometer
6. Calibration of low range voltmeter using potentiometer
7. Determination of thermosemf using potentiometer
8. Verification of truth tables of basic logic gates using ICs
9. Verification of De Morgan's theorems using logic gate ICs.
10. Use of NAND as universal building block.

Note : Use of digital balance permitted

Board of Studies Date : 02.05.2023

METHOD OF EVALUATION:

<tr><td colspan="2">Objectives of the Course</td><td colspan="6">1.To bridge the gap and facilitate the transition from higher secondary to tertiary education;
2.To instil confidence among stakeholders and inculcate interest for Mathematics.</td></tr>
<tr><td colspan="8">Course Outcomes:
Students will be able to
CO1: Prove the binomial theorem and apply it to find the expansions of any $(x + y)^n$ and also, solve the related problems
CO2: Find the various sequences and series and solve the problems related to them. Explain the principle of counting.
CO3: Find the number of permutations and combinations in different cases. Apply the principle of counting to solve the problems on permutations and combinations
CO4: Explain various trigonometric ratios and find them for different angles, including sum of the angles, multiple and submultiple angles, etc. Also, they can solve the problems using the transformations.
CO5: Find the limit and derivative of a function at a point, the definite and indefinite integral of a function. Find the points of min/max of a function.</td></tr>
<tr><td colspan="2">Course Outline</td><td colspan="6">UNIT-I: (Hours: 6)
Algebra: Binomial theorem, General term, middle term, problems based on these concepts</td></tr>
<tr><td colspan="2"></td><td colspan="6">Unit II: (Hours: 6)
Sequences and series (Progressions). Fundamental principle of counting. Factorial n.</td></tr>
<tr><td colspan="2"></td><td colspan="6">Unit III:(Hours: 6)
Permutations and combinations, Derivation of formulae and their connections, simple applications, combinations with repetitions, arrangements within groups, formation of groups.</td></tr>
<tr><td colspan="2"></td><td colspan="6">Unit IV: (Hours: 6)
Trigonometry: Introduction to trigonometric ratios, proof of sin(A+B), cos(A+B), tan(A+B) formulae, multiple and sub multiple angles, sin(2A), cos(2A), tan(2A) etc., transformations sum into product and product into sum formulae, inverse trigonometric functions, sine rule and cosine rule.</td></tr>
<tr><td colspan="2"></td><td colspan="6">Unit V: (Hours: 6)
Calculus: Limits, standard formulae and problems, differentiation,</td></tr>
</table>

	first principle, uv rule, u/v rule, methods of differentiation, application of derivatives, integration - product rule and substitution method.

23UMAGEC2	PHYSICS –II	Elective	2	1	-	3	3	70

COURSE	ELECTIVE-II (GE)
COURSE TITLE	PHYSICS –II
CREDITS	3
COURSE OBJECTIVES	To understand the basic concepts of optics, modern Physics, Relativity, quantum physics, semiconductor physics and electronics

UNITS	COURSE DETAILS
UNIT-I	**OPTICS:** Interference – interference in thin films –colors of thin films – air wedge – determination of diameter of a thin wire by air wedge – diffraction – diffraction of light– normal incidence – experimental determination of wavelength using diffraction grating (no theory) – polarization – polarization by double reflection – Brewster's law – optical activity – application in sugar industries
UNIT-II	**ATOMIC PHYSICS:** Atom models – Bohr atom model – mass number – atomic number – nucleons – vector atom model – various quantum numbers – Pauli's exclusion principle – electronic configuration – periodic classification of elements – Bohr magneton – Stark effect – Zeeman effect (elementary ideas only).
UNIT-III	**NUCLEAR PHYSICS:** Nuclear models – magic numbers – shell model – nuclear energy – mass defect – binding energy – radioactivity – uses – half life - radio isotopes and uses – nuclear fission – energy released in fission – chain reaction - atom bomb - nuclear fusion – thermonuclear reactions – differences between fission and fusion (elementary ideas only).
UNIT-IV	**INTRODUCTION TO RELATIVITY AND GRAVITATIONAL WAVES**: Frame of reference – postulates of special theory of relativity – Galilean transformation equations – Lorentz transformation equations – derivation – length contraction – time dilation – twin paradox – mass-energy equivalence.
UNIT-V	**SEMICONDUCTOR PHYSICS:** p-n junction diode – forward and reverse biasing – characteristic of diode – zener diode – characteristic of zener diode – voltage regulator – full wave bridge rectifier.

Board of Studies Date : 02.11.2023	

METHOD OF EVALUATION:

Continuous Internal Assessment	End Semester Examination	Total	Grade
30	**70**	**100**	

COURSE OUTCOMES:
At the end of the course, the student will be able to:

COURSE OUTCOMES	**CO1**	Explain the concepts of interference diffraction using principles of super position of waves and rephrase the concept of polarization based on wave patterns
	CO2	Outline the basic foundation of different atom models and various experiments establishing quantum concepts. Relate the importance of interpreting improving theoretical models based on observation..
	CO3	Summarize the properties of nuclei, nuclear forces structure of atomic nucleus and nuclear models. Solve problems on delay rate half-life and mean-life. Interpret nuclear processes like fission and fusion. Understand the importance of nuclear energy in nuclear field.
	CO4	To describe the basic concepts of relativity like equivalence principle, inertial frames and Lorentz transformation. Extend their knowledge on concepts of relativity and vice versa.
	CO5	Summarize the working of semiconductor devices like junction diode, Zener diode, transistors and full wave bridge rectifer.

MAPPING WITH PROGRAM OUT COMES:

COURSE	Elective Course (GE)
COURSE TITLE	PHYSICS PRACTICAL – II
CREDITS	2
COURSE OBJECTIVES	1.Apply the concepts of Light, electricity and magnetism and waves, 2.Set up experiments to verify theories, quantify and analyse the observations. 3.To do error analysis and correlate results

Any Eight

1. Radius of curvature of lens by forming Newton's rings
2. Thickness of a wire using air wedge
3. Wavelength of mercury lines using spectrometer and grating
4. Refractive index of material of the lens by minimum deviation
5. Refractive index of liquid using liquid prism
6. Determination of AC frequency using sonometer
7. Specific resistance of a wire using PO box
8. Thermal conductivity of poor conductor using Lee's disc
9. Determination of figure of merit table galvanometer
10. Determination of Earth's magnetic field using field along the axis of a coil
11. Characterisation of Zener diode
12. Construction of Zener/IC regulated power supply
13. Construction of AND, OR, NOT gates using diodes and transistor
14. NOR gate as a universal building block

Title of the Course		DIFFERENTIAL EQUATIONS AND ITS APPLICATIONS					
Paper Number		CORE VI					
Category	CORE	Year	II	Credits	4	Course Code	23UMACC6
		Semester	III				
Instructional Hours per week		Lecture	Tutorial		Lab Practice		Total
		4	1		--		5
Pre-requisite		12^{th} Standard Mathematics					
Objectives of the Course		1. Knowledge about the methods of solving Ordinary and Partial Differential Equations. 2. The understanding of how Differential Equations can be used as a powerful tool in solving problems in science.					

Course Outcomes :

Students will be able to

CO1: Determine solutions of homogeneous equations, non- homogeneous equations of degree one in two variables, solve Bernoulli's equations and exact differential equations.

CO2: Find the solutions of equations of first order but not of higher degree and to Determine particular integrals of algebraic, exponential, trigonometric functions and their products.

CO3: Find solutions of simultaneous linear differential equations, linear equations of second order and to find solutions using the method of variations of parameters.

CO 4: Form a PDE by eliminating arbitrary constants and arbitrary functions, find complete, singular and general integrals, to solve Lagrange's equations

CO 5: Explain standard forms and Solve Differential equations using Charpit's method.

Course Outline	
	UNIT-I: (Hours: 15) Ordinary Differential Equations: Variable separable - Homogeneous Equation-Non-Homogeneous Equations of first degreein two variables - Linear Equation - Bernoulli's Equation-Exactdifferential equations. **(Chapter2: Sections 1 to 6)**
	UNIT-II: (Hours: 15) Equation of first order but of higher degree: Equation solvable for dy/dx-Equation solvable for y-Equation solvable for x- Clairauts' form - Linear Equations with constant coefficients-Particular integrals of algebraic, exponential, trigonometric functions and their products. **(Chapter4: Sections 1,2 ,3 and Chapter5: 1 to 4)**
	UNIT-III: (Hours: 15) Simultaneous linear differential equations- Linear Equations of the Second Order -Complete solution in terms of a knownintegrals-Reduction to the Normal form-Change of the Independent Variable-Method of Variation of Parameters. **(Chapter 6 and Chapter 8: Sections 1 to 4)**
	UNIT-IV: (Hours: 15) Partial differential equation: Formation of PDE by Eliminating arbitrary constants and arbitrary functions- complete integral – singular integral- General integral- Lagrange's Linear Equations – Simple Applications. **(Chapter12: 1,2,3, and 4)**

	UNIT-V: (Hours: 15) Special methods – Standard forms- Charpit's Method- Simple Applications. **(Chapter12: 5, and 6)**

<tr><td colspan="2">Objectives of the Course</td><td colspan="6">1. To understand the concepts of sampling distribution and moments of t-distribution.
2. To acquire knowledge about statistical hypothesis and error values
3. To gain knowledge about the testing of significance for Large samples and Small samples</td></tr>
<tr><td colspan="8">Course Outcomes:
Students will be able to
CO1: learn the concepts of sampling distribution, Estimation and testing of hypothesis.
CO2: understand the notions of Student t distribution, moments of chi-square, t-test and F-distribution.
CO3: estimate the error value and standard error for mean and test the hypothesis for them and validate the claims
CO4: analyse the properties of Maximum Likelihood estimators, chi-square, t and F distributions and solve the related problems.
CO5: derive the distribution of chi-square, t and F distribution and defend its applications for small samples.</td></tr>
<tr><td colspan="2">Course Outline</td><td colspan="6">Unit – I (Hours: 12)
Sampling Distribution: Sampling distribution, Sampling distribution of $\bar{X}$, chi-square distribution, MGF of χ^2 - distribution, characteristic function of χ^2, Additive property, Relation between moments. Student t distribution, Moments of t distribution, limiting form of t-distribution and properties F – distribution, Moments of F-distribution.
Chapter 22 (Page No.: 22.1 - 22.40)</td></tr>
<tr><td colspan="2"></td><td colspan="6">Unit – II (Hours: 12)
Estimation: Point Estimation: Estimator and estimate, unbiased estimator, Examples, Efficiency, Cramer – Rao inequality, and Rao – Blackwell theorem, Method of maximum likelihood, Properties of ML estimators and Examples.
Chapter 23 (Page No.: 23.1 - 23.25, 23.46 - 23.56)</td></tr>
<tr><td colspan="2"></td><td colspan="6">Unit - III (Hours: 12)
Large Samples: Population, Parameter and statistic, sampling distribution, Characteristic of sampling distribution, standard error of the mean, test of hypothesis – Procedure, One tail test, two tail test, test for a specified mean, test for equality of two means, test for a specified proportion, test for equality of two proportions.
Chapter 24 (Page No.: 24.1 – 24.41)</td></tr>
</table>

	Unit - IV (Hours: 12) **Small samples:** t Test, uses of t – test, Properties of sampling distribution of t, Test for a specified Mean, Test of significance for the difference between two population means, confidence interval for small samples. F – test, Procedure for equality of two population variances. **Chapter 25 (Page No. :25.1 –25.30)** **Chapter 26 (Page No. :26.1 –26.12))**
	Unit –V (Hours: 12) **Small samples:** chi-square test, Additive property, Pearsons' statistic, uses of χ^2- test, Test for independence of Attributes, Test for a specified Population Variance, Test of Independence of attributes. **Chapter 27 (Page No.:27.1 – 27.46)**
Extended Professional Component (is a part of Internal Component only, not to be included in the External Examination question paper)	Questions related to the above topics, from various competitive examinations UPSC/TRB/NET/UGC – CSIR/ GATE/ TNPSC/ others to be solved.
Skills acquired from the course	Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferrable Skill
Recommended Text	Vittal P. R, Mathematical Statistics, Margham Publications, Chennai. (For Units I - V)
